

Water Resources Engineering

*MBR Wastewater Treatment Facility,
Los Lunas*

Our future.....

*MBR Wastewater Treatment Facility,
Ruidoso/Ruidoso Downs JUB*

*New Water System,
Spaceport America*

*MBR Cassette Installation,
Ruidoso/Ruidoso Downs JUB Facility*

*Wastewater Treatment Facility Campus,
Los Alamos*

As we have over the past half century, Molzen Corbin continues to have a dynamic effect in ensuring safe drinking water for the State's citizens and in ensuring that treated wastewater returned to New Mexico's precious rivers and streams is of the highest purity.

We have completed **more than 450 major wastewater and water projects** for municipalities, water associations, pueblos, tribes, and State and Federal agencies since 1960. Our vast corporate experience encompasses all aspects of wastewater engineering, including sewer lines, lift stations, treatment facilities, nutrient removal, and effluent reuse facilities; and all aspects of water system engineering including water production, storage and treatment facilities.

Projects range from **studies to planning and design of world class bio-membrane wastewater treatment plant facilities, to programming and design of water and wastewater facilities for Spaceport America**, the world's first, purpose-built commercial spaceport in southern New Mexico.
